By Gojko Adzic

Artificial intelligence (AI) is rapidly changing our world. From self-driving cars to facial recognition software, AI is already having a major impact on our lives. And as AI continues to develop, it is only going to become more powerful and pervasive.

In his groundbreaking book, *Humans vs Computers*, Gojko Adzic explores the future of humanity and AI. He takes an in-depth look at the ways in which AI is changing our world, and he argues that we need to be prepared for the challenges that lie ahead.

Adzic begins by discussing the history of AI, from its early beginnings to its current state-of-the-art. He then examines the different ways in which AI is being used today, from powering self-driving cars to diagnosing diseases.

Adzic also explores the potential risks of AI. He argues that we need to be aware of the potential for AI to be used for malicious purposes, such as developing autonomous weapons or creating surveillance systems that could be used to oppress people.

Adzic concludes by arguing that we need to be proactive in shaping the future of AI. He calls for a global dialogue on the ethical and social implications of AI, and he urges us to work together to ensure that AI is used for good.

Humans vs Computers is a must-read for anyone who wants to understand the future of AI. Adzic provides a clear and concise overview of the current state of AI, and he offers a thought-provoking exploration of the challenges and opportunities that lie ahead.
