through fractional reserve banking (expansionary monetary policy)

## CENTRAL BANK

extends a loan to a commercial bank. New commercial bank money is created. Central bank can also create money by purchasing financial assets.

## COMMERCIAL BANK

keeps the required fraction of loan sum as deposit and extends a loan to other commercial banks.

## OTHER BANKS

also keep the required fraction as deposit, and are free to re-loan the rest. Because the loan counts as money, the total monetary supply increases.

As a loan is paid back, more commercial bank money disappears from existence. Since loans are continually being issued in a normally functioning economy, the amount of broad money in the economy remains relatively stable.
